Parklands
Christchurch 8083

Thanks for your accommodating a site visit to inspect the paint wash system.

We have spoken about the upcoming measures business will be required to undertake as part of the effort to manage the discharge of paint wash water in the most environmentally friendly way.

Today's site visit has confirmed that, as per the Trade Waste application submitted to Council on 25 November 2015, **Paintspecs** have a system in place, where the brushes are all washed in one location in a system that reduces water usage and allows some settling of the paint solids. This waste water in this system is discharged to the Councils sewer network. This system meets all the requirements the Christchurch City Council has set as part of the way paint wash water is managed and we Thankyou for your efforts.

Thanks for your initiative and remember to keep rivers, streams and Stormwater drains clean.

If anyone wishes to query the information contained in this document they may contact me directly.
